

Presented by Nirvana

Team from NIT- Patna

# Project Name : Nirvana

## Team Members:

- Jayraj Sinh Zala
- Dhruv Narayan Jaiswal

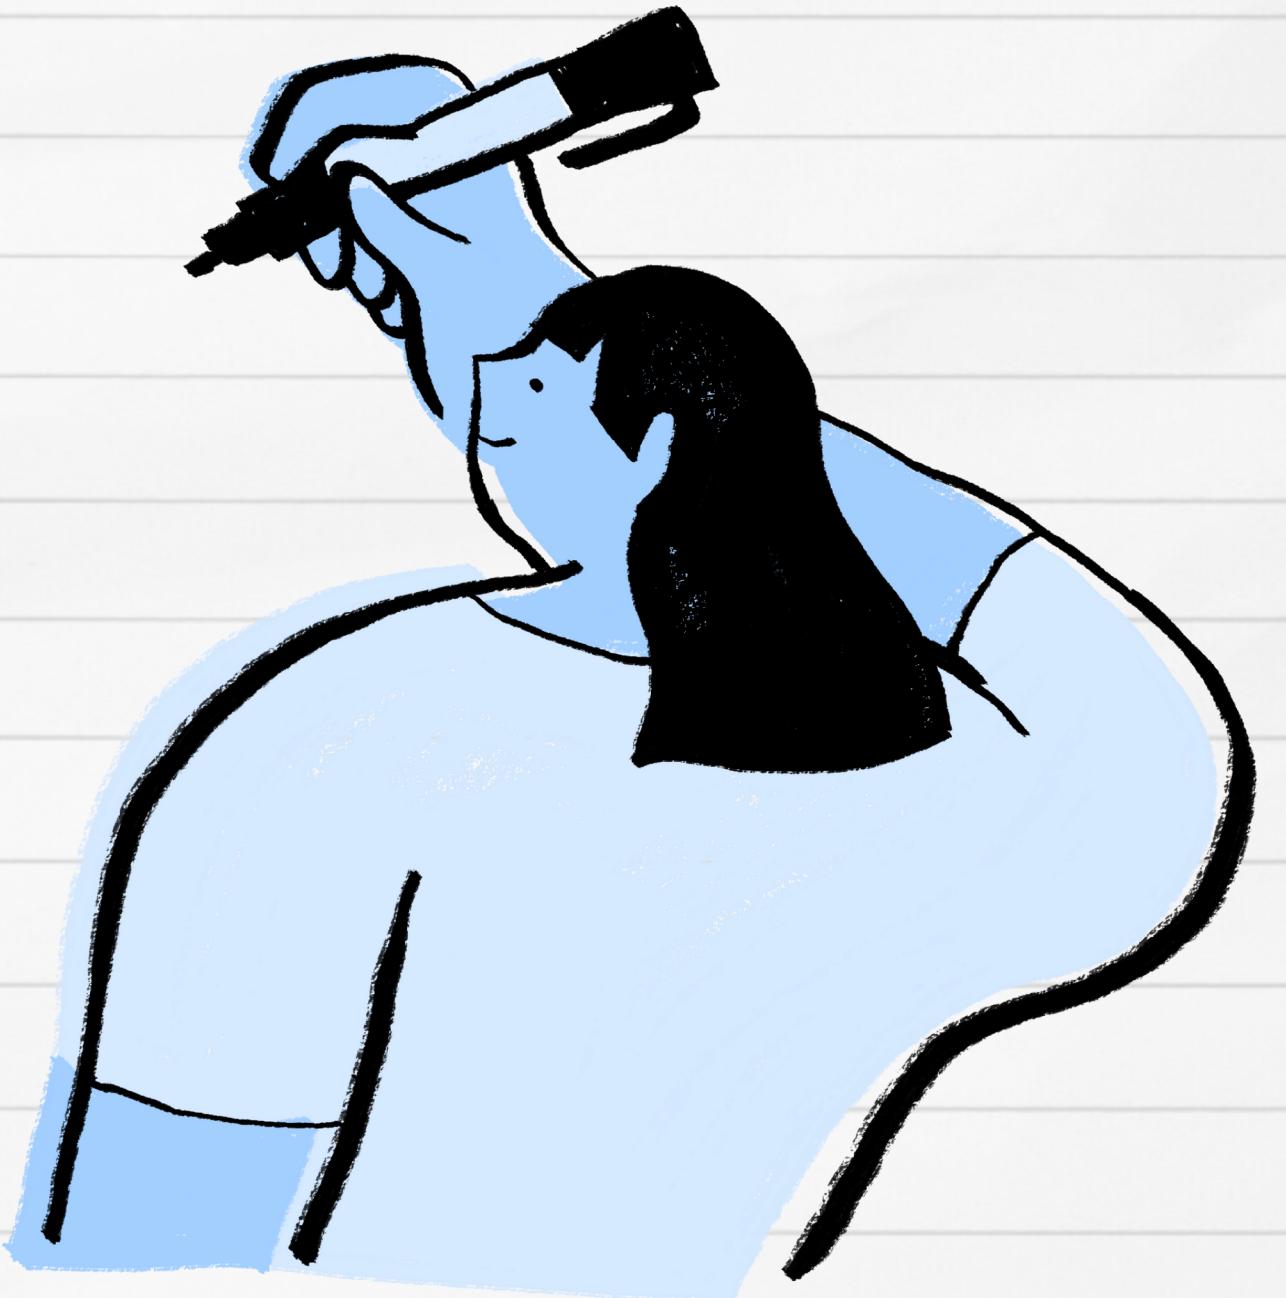

# Problem Statement :

The participants will leverage ChatGPT API to design and develop inventive solutions for real-world issues, highlighting the creative potential of AI-based text generation. The goal is to promote innovation and problem-solving.

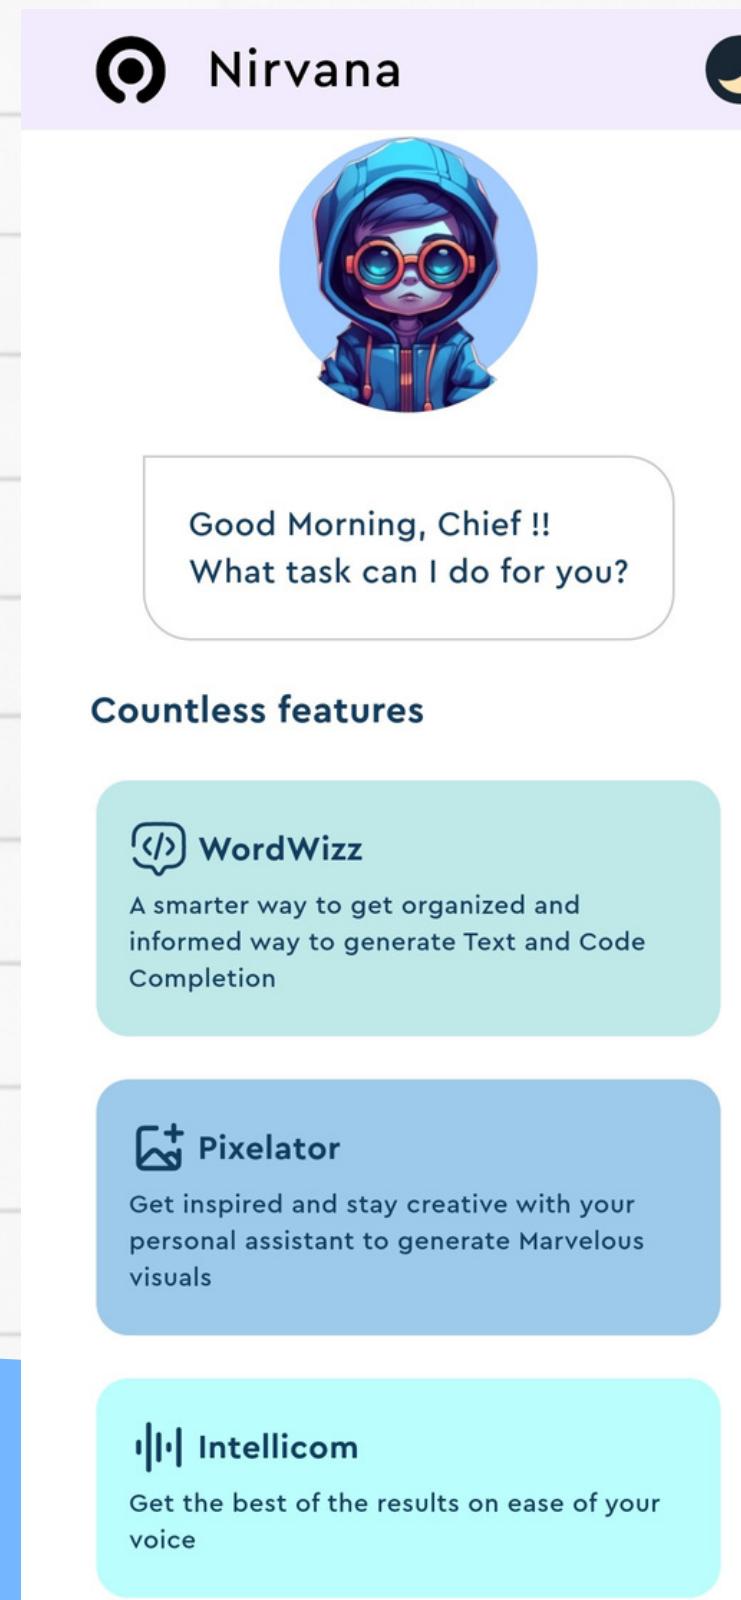

# Solution :

We have formulated a project proposal to address the problem statement, which involves developing an application that integrates the ChatGPT API. The application will generate text and images in response to user input, which can be submitted in either text or voice message format.

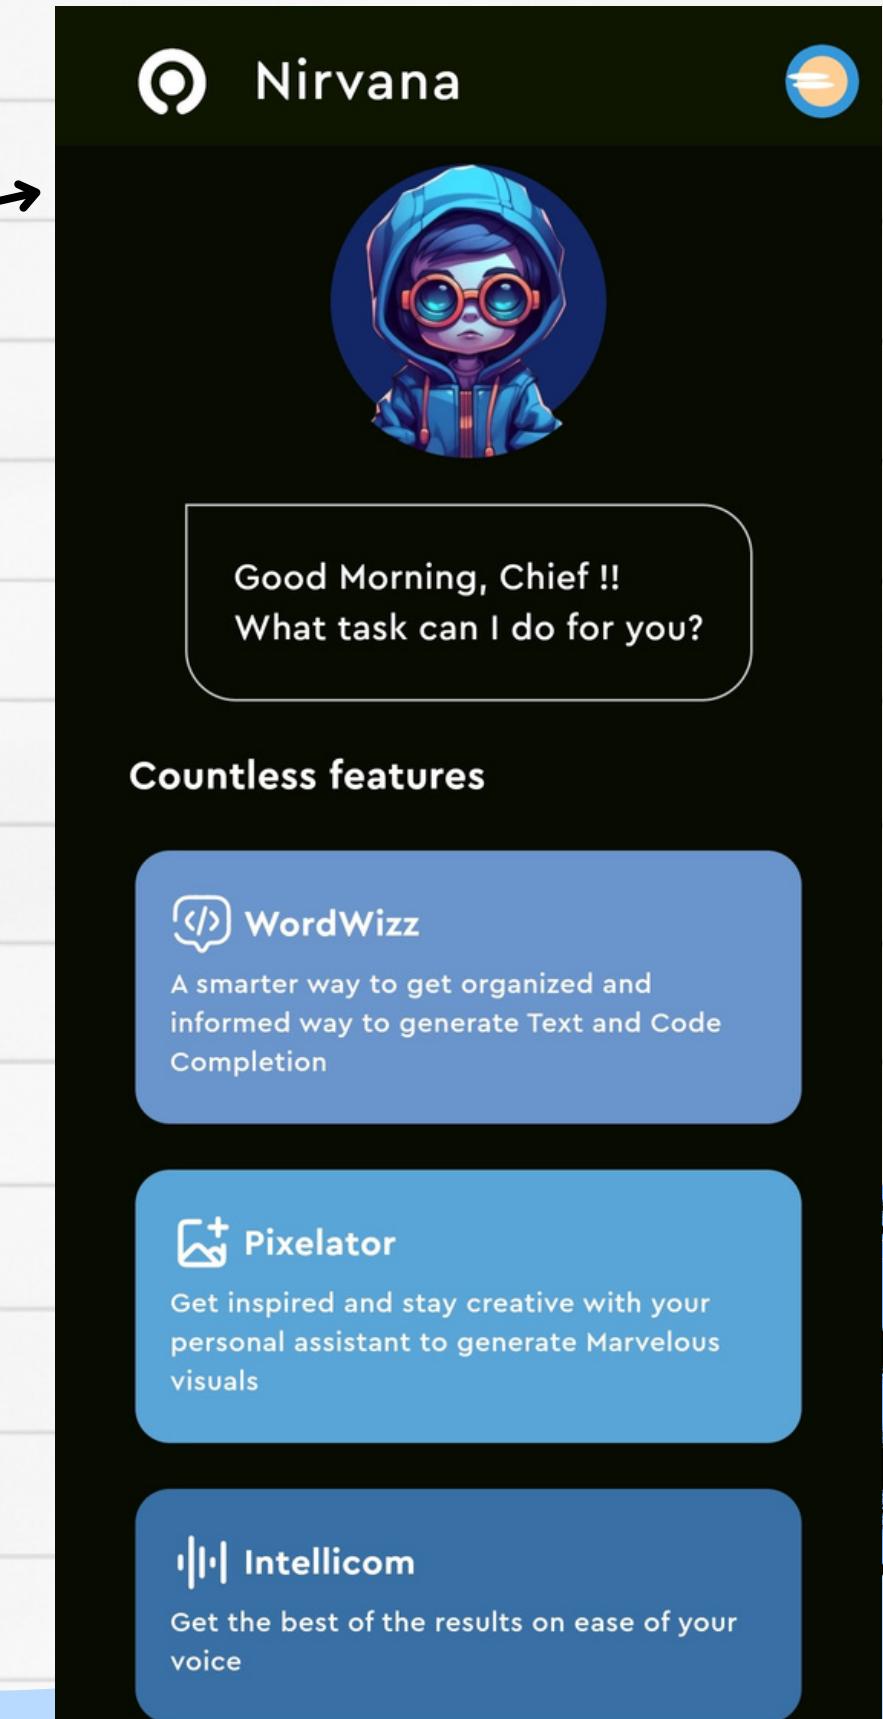

# themes :

We offer two distinct themes, a light and dark option.

Selecting this icon will transform its appearance to reflect the dark theme.

# Key Features :

 Nirvana 

Good Morning, Chief !!  
What task can I do for you?

Countless features

 WordWizz

A smarter way to get organized and informed way to generate Text and Code Completion

 Pixelator

Get inspired and stay creative with your personal assistant to generate Marvelous visuals

 Intellicom

Get the best of the results on ease of your voice

01.

## WordWizz

Nirvana's capabilities include generating text and responding to user input, as well as generating code in various programming languages for a variety of problems.

02.

## Pixelator

By utilizing this feature, Nirvana has the ability to generate images in various styles, such as sketches, oil paintings, and more, based on user input.

03.

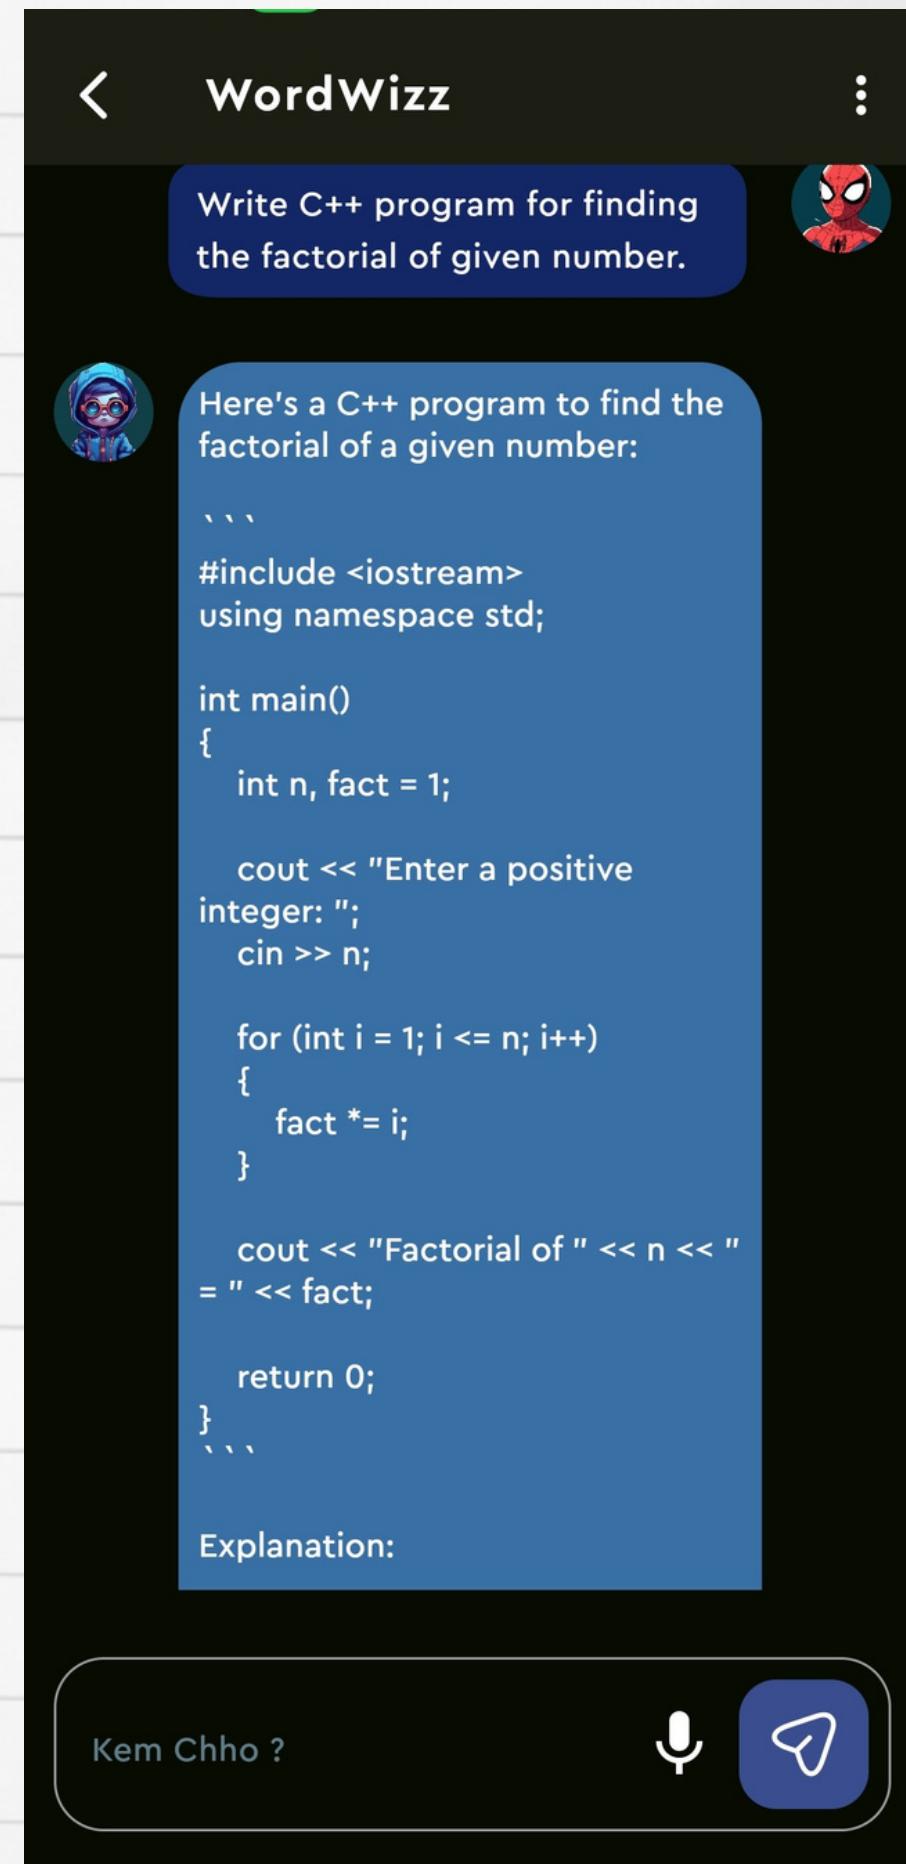

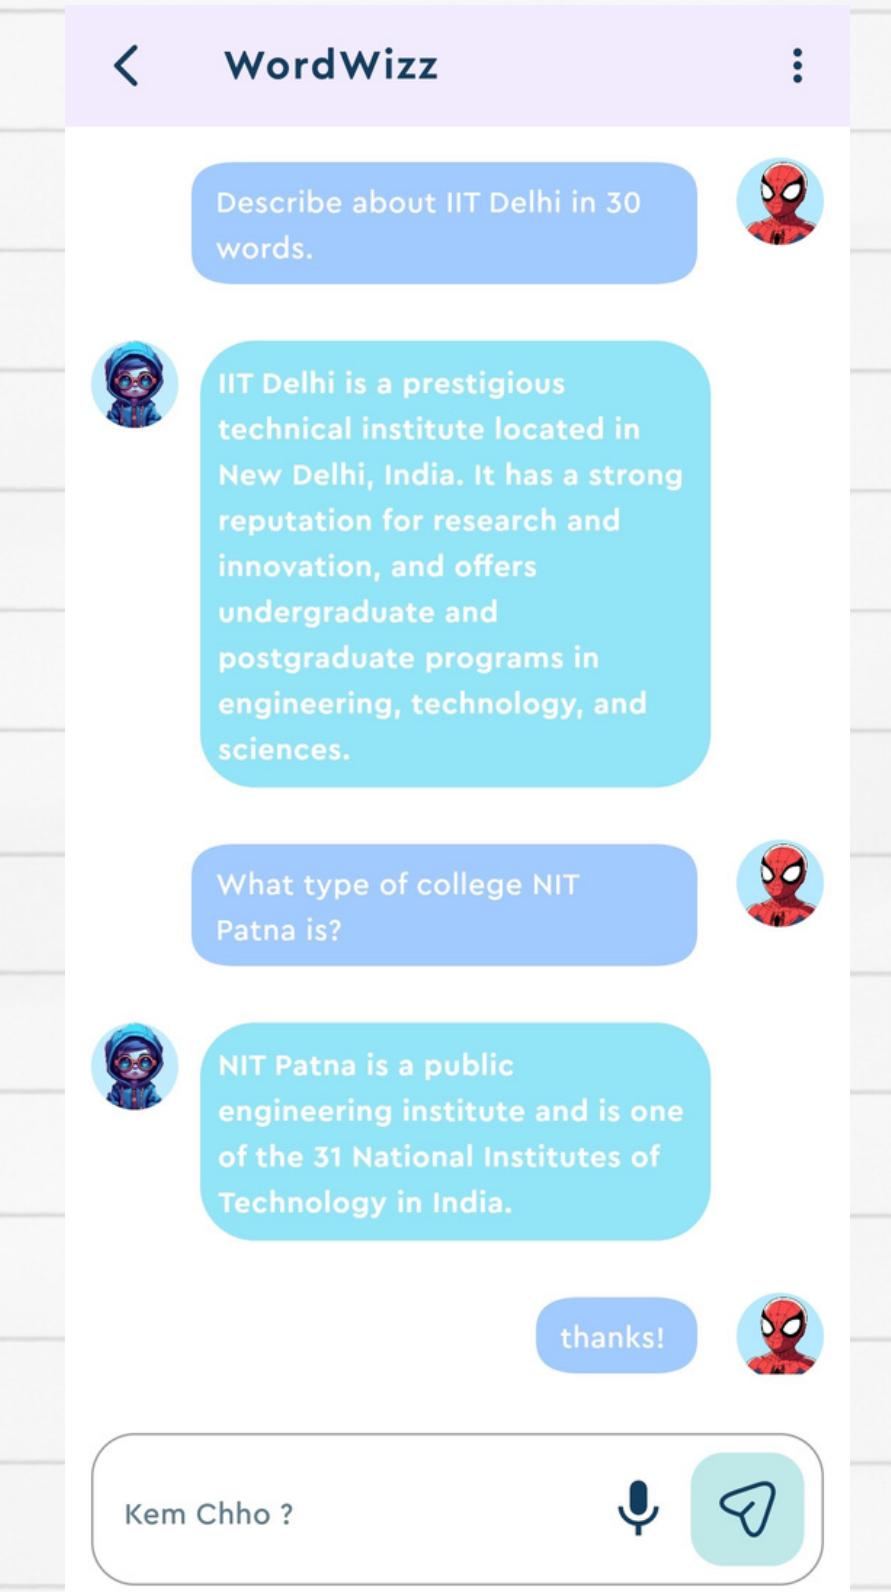

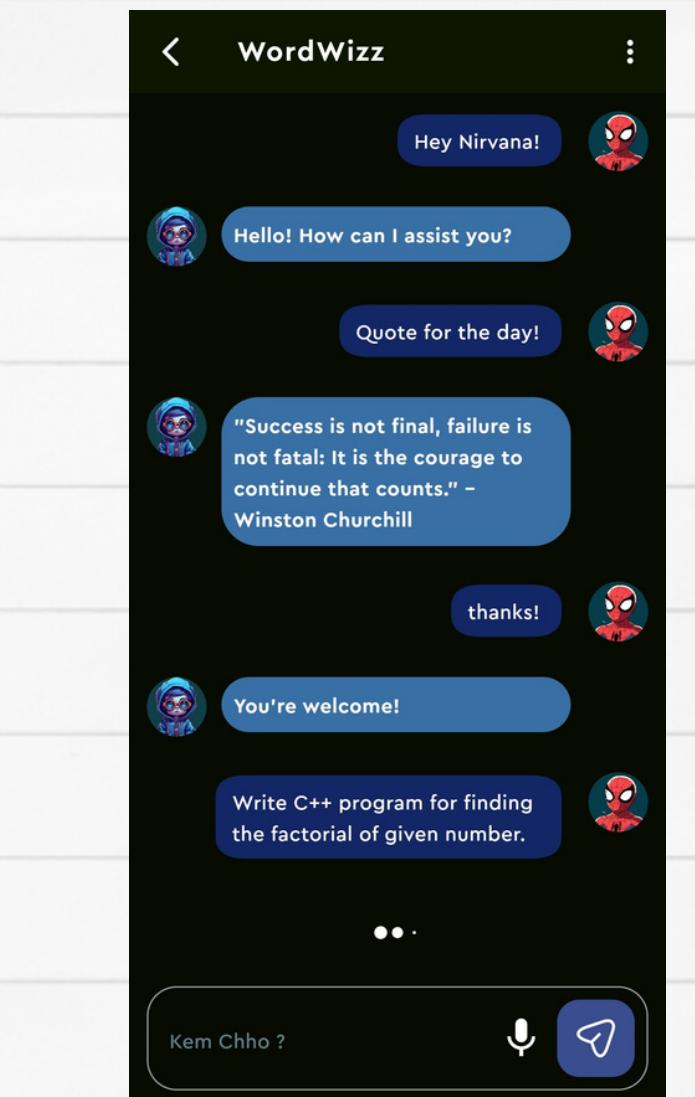

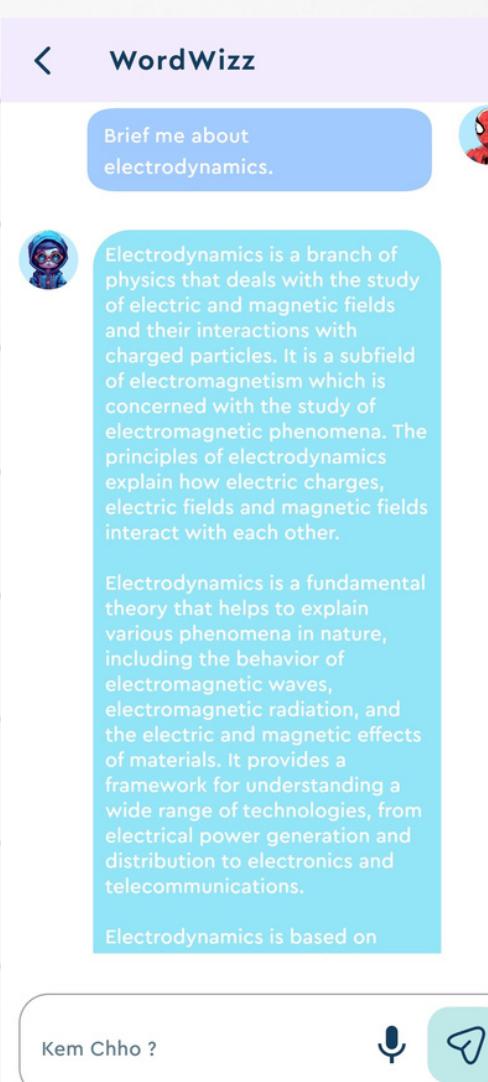

## Intellicom

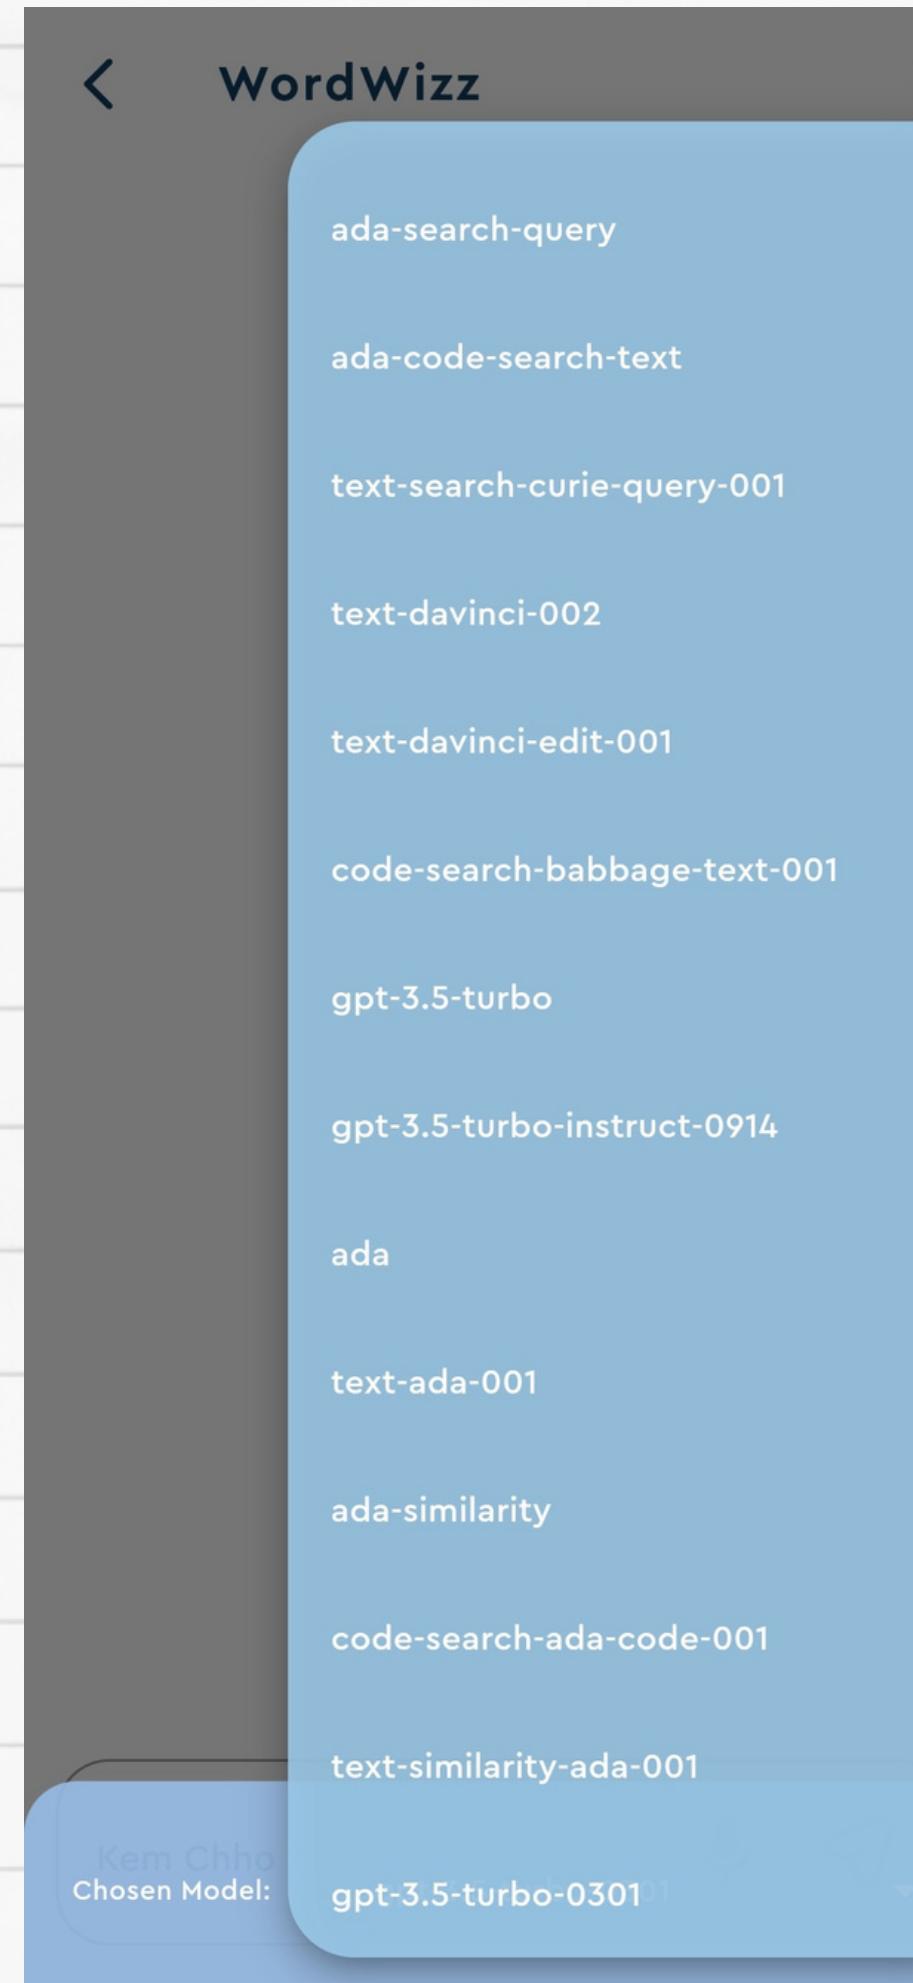

Nirvana offers voice message assistance, whereby it can listen to user's voice messages and respond by reciting them.

# WordWizz :

The list of actions entails producing refined text based on user input, in addition to generating code across various programming languages to tackle different challenges using both textual and voice-based inputs.

Refer to the attached screenshots of this feature:

# Language Model :

WordWizz uses different language model for the text generation.

By selecting another language model it can reply in different way for the same problem.

By using a language model that is tailored to their specific needs, WordWizz can ensure that its responses are more accurate and appropriate. Additionally, this feature allows WordWizz to adapt to different contexts and situations, making it a versatile tool for communication and problem-solving. Whether you're looking for help with a complex issue or simply trying to have a conversation with someone in a different language, WordWizz's language model selection feature is sure to come in handy.

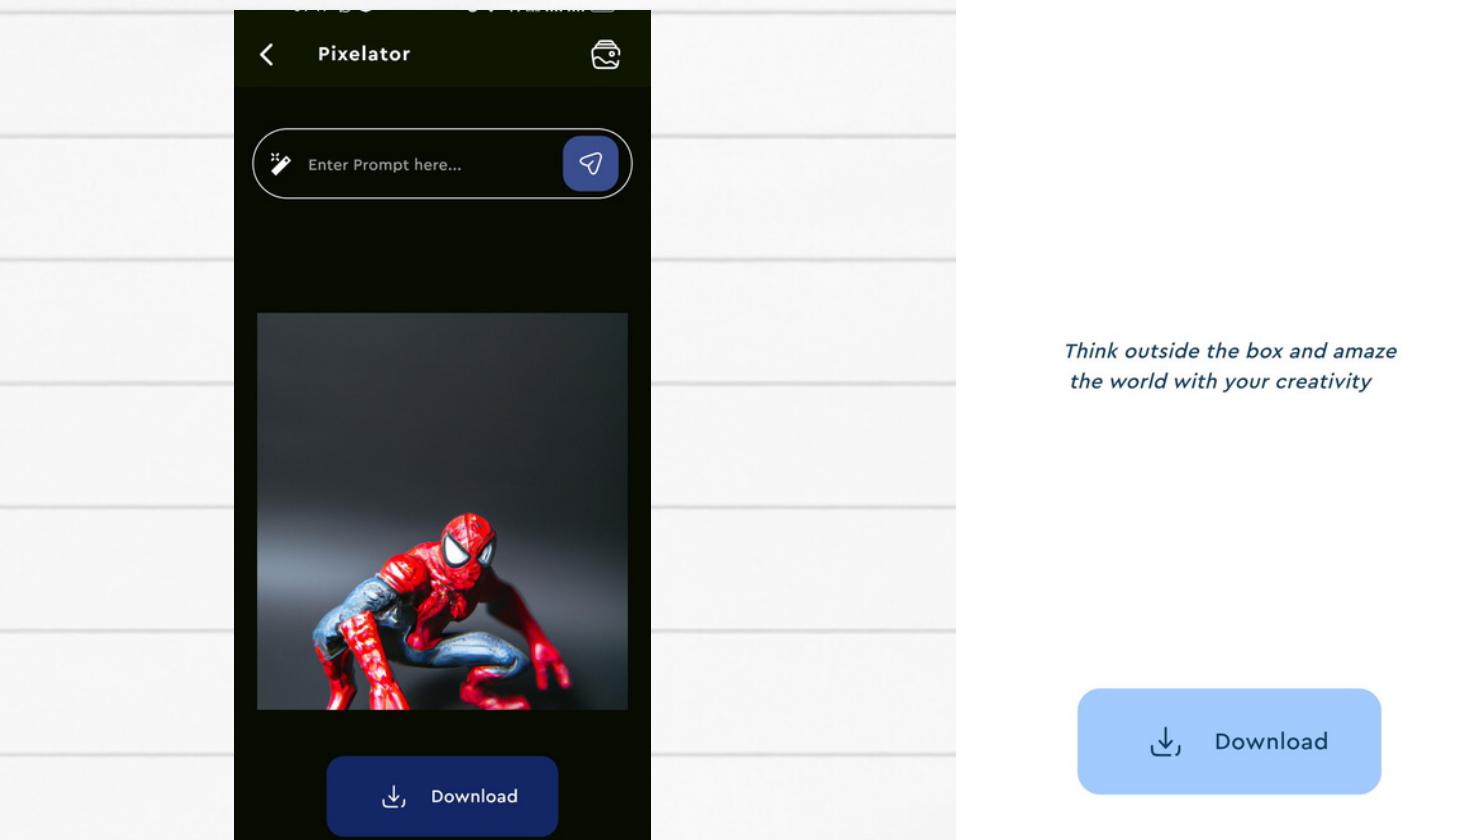

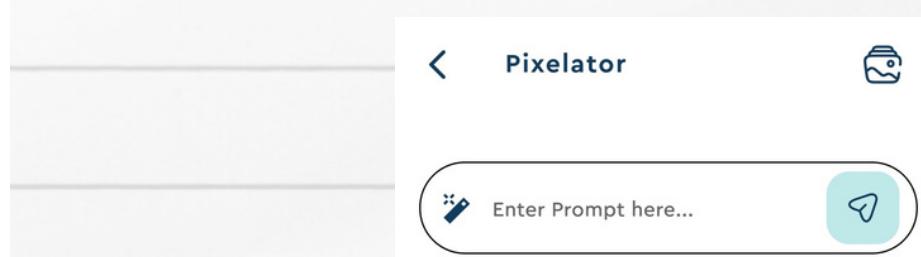

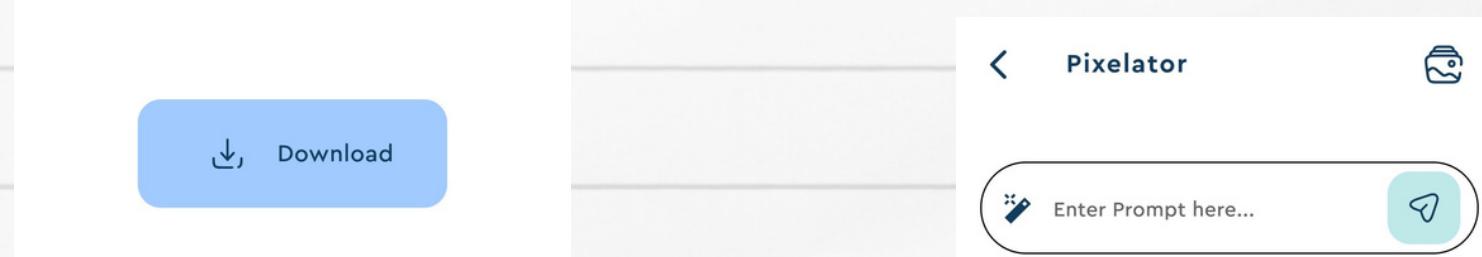

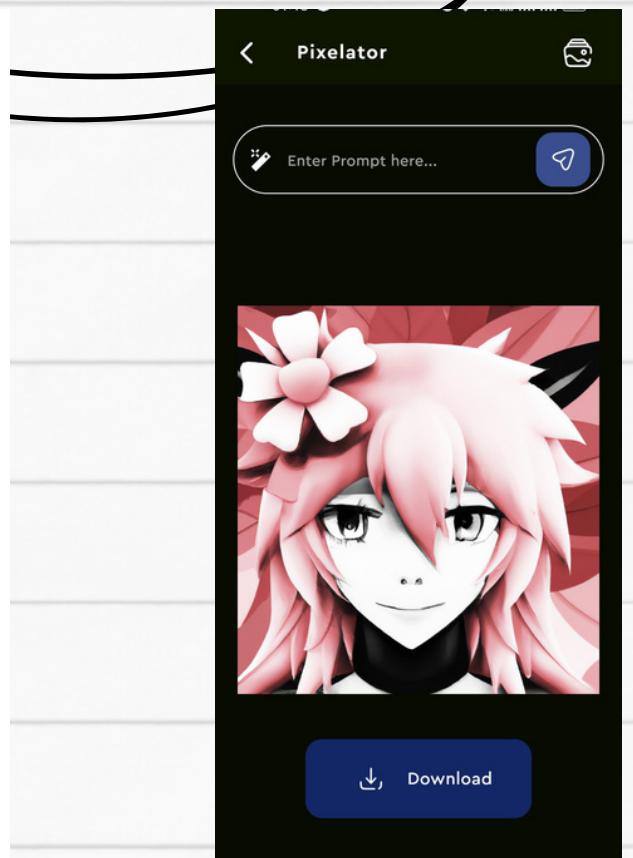

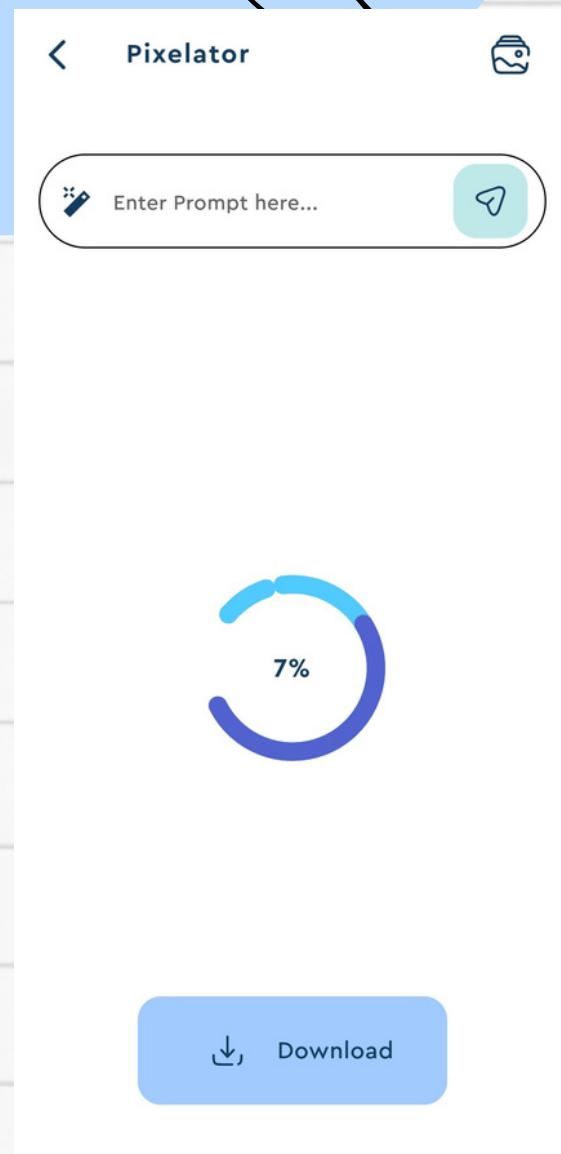

# Pixelator

Elevate your creativity and remain inspired by utilizing a personal assistant to produce stunning visuals.

Nirvana's image generation feature is an innovative tool that enables users to generate images in various styles, such as sketches and oil paintings, based on their input.

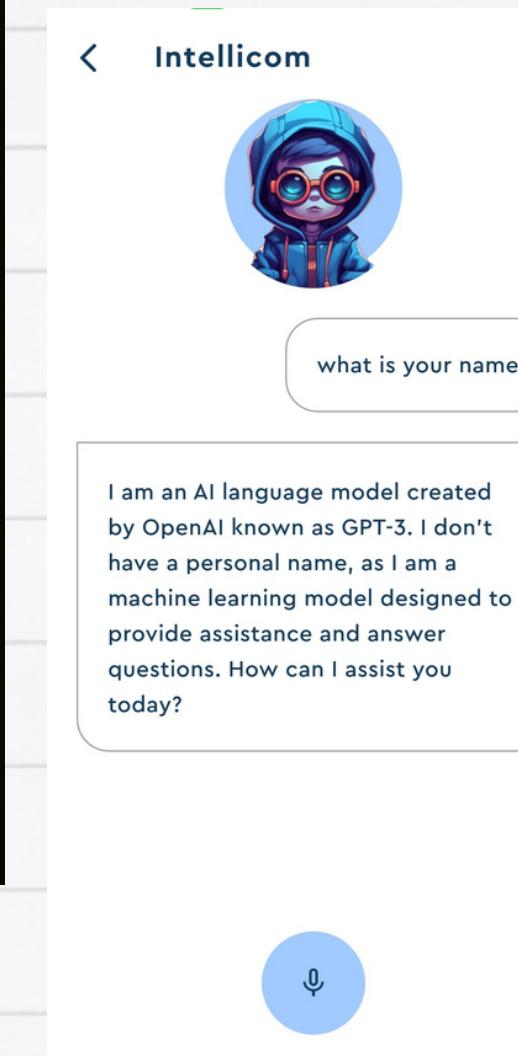

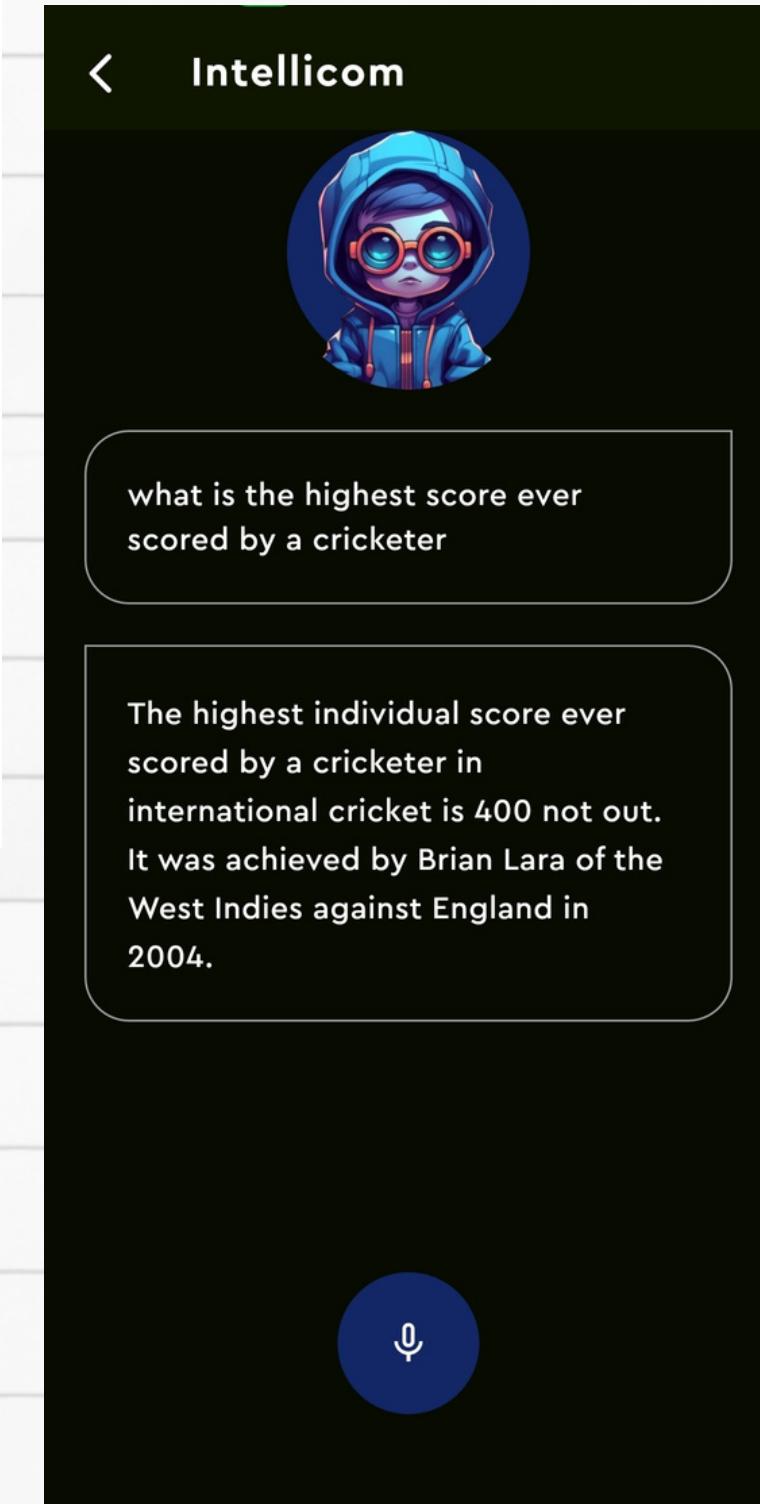

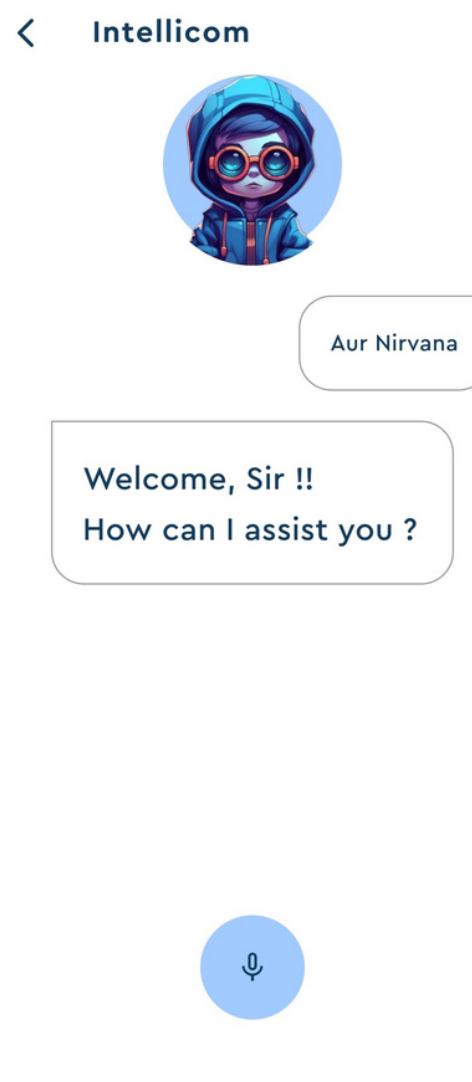

The feature's potential extends beyond creative expression, with several practical uses. For instance, artists and designers can leverage it to create multiple iterations of a concept or idea in different styles, streamlining the decision-making process. Likewise, businesses can utilize this feature to create customized visuals for their branding and marketing strategies. The possibilities with Nirvana's image generation feature are infinite.

Furthermore, users can save the resulting images for future use.

# Intellicom

Get the best of the results on  
ease of your voice.

Nirvana offers voice message support, allowing for the listening and recitation of voice messages on the user's behalf. Its advanced technology facilitates an understanding of the user's voice commands, providing accurate and concise responses.

# Miscellaneous

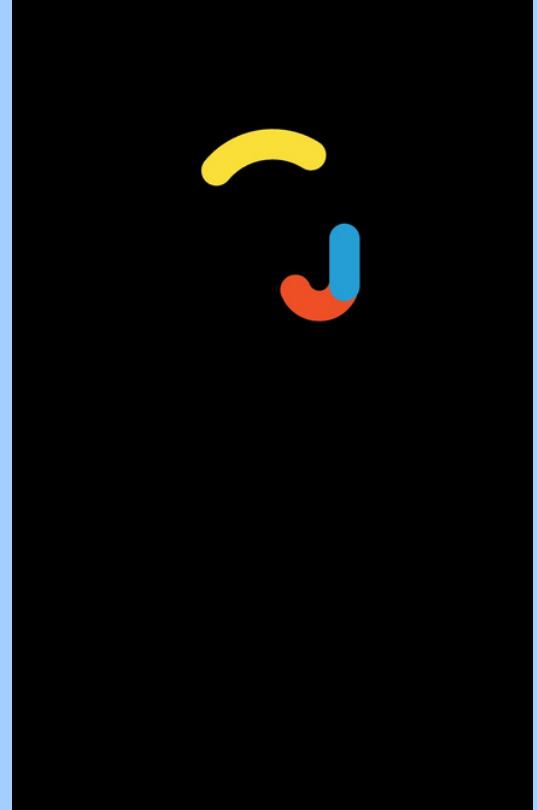

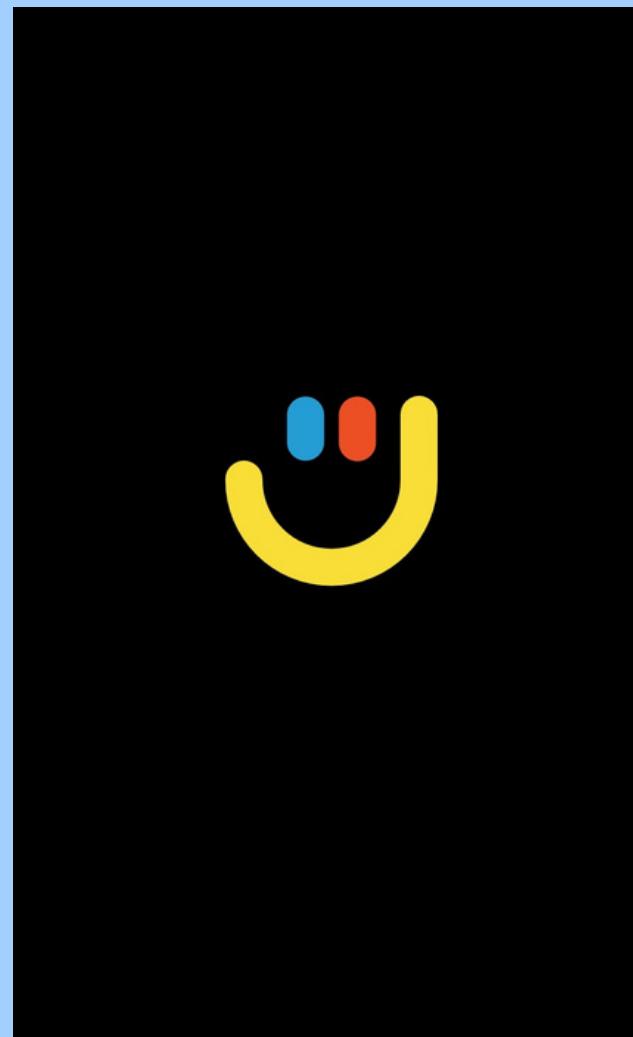

## Art Gallery

The Art Gallery section on the Pixelator page will contain all the downloaded images.

## Splash Screen:

Nirvana starts through the following animation in its splash screen.

Presented by Nirvana.

thank  
you very  
much!
